Cambridge began to print the Bible in the Geneva version in 1558 under a charter granted by Henry VIII in 1534. The Cambridge Geneva Bible appeared in 1691. Meanwhile in London, Christopher Barker had acquired a virtual monopoly in Bible printing by virtue of his patent as Royal printer, granted in 1577. To break that monopoly, Cambridge University Press and the Bucks insisted that they had the means to produce far better edited editions of the Bible in their university town. In 1628, Charles I ratified Henry VIII's charter, and this Bible was the first publication produced after that act. It was, indeed, significantly more accurate than the Barker editions of the King James Bible, and it began a Cambridge tradition of care for the text. (Herbert 424. Darlow and Moule 324. STC 2285. See also: 300 Years of Printing the Authorized Version of the Bible at Cambridge, 1629-1929, Cambridge, 1929. Norton, David. *A Textual History of the King James Bible*, pp. 82-89.)

His library was sold at auction in 1924-7. Despite its unfortunate incompleteness, this is a very attractive, clean copy, with many wonderful images. \$9,500

A lovely printed Book of Hours, produced by Kerver's widow, Yolande Bohomme (c. 1490-1557), who was one of a handful of important female book printers in Paris at this time. She is known to have been the first woman to publish the Bible. Her output is estimated to be between 136 and 200 publications, though it is difficult to be certain, as she often used her husband's name on the colophon in her early books. Bonhomme joined another important female printer, Charlotte Guillard, to demand better quality paper from the papermakers' guild. OCLC lists three copies only (at Morgan Library, Cambridge, State Library of Victoria in Australia). Roger Wieck included this in his influential exhibition catalogue, *Painted Prayers*, as Item #21 (*Painted Prayers: The Book of Hours in Medieval and Renaissance Art*, Braziller in association with the Morgan Library, 1997). (Bohatta, *Livres d'Heures*, 323. Lacombe 347. Brunet V, 1624, #198.)

The sixth and final fifteenth-century edition of Eusebius's *Preparation of the Gospel*, first published by Jenson in 1470. The *Preparation for the Gospel* is a significant work by Eusebius Caesariensis (AD 260/265 – 339/340), who is best known for writing the first surviving history of the Christian Church as a chronologically-ordered account, complete from the time of the Apostles to his own time. The *Preparation* is an introduction to Christianity for pagans, in which the author attempts to prove the excellence of Christianity over pagan religion and philosophy. Its fifteen books have been completely preserved. For later readers, it is of particular value because it contains added information from historians and philosophers which is not available elsewhere, including excerpts from the writings of Porphyry, the Phoenician priest Sanchunianthon, the Platonist philosopher Atticus and the Middle Platonist philosopher Numenius of Apamea. \$600

First UK edition. First published by Charlton Co. in New York earlier the same year. In Gilman’s words, the Androcentric Theory supposes that men are the true form of humanity. In contrast, Gilman proposes the “Gynæocentric Theory,” which supposes that “the female is the race type, and the male, originally but a sex type, reached a later equality with the female,” (pp. 7-8). Gilman writes, “When we learn to differentiate between humanity and masculinity, we shall give honor where honor is due,” (p. 8). (Blain, *Feminist Companion*, 427.)

"Leibniz was moved by the publication in 1704 of Coste's French translation of Locke's Essay on Human Understanding to lay his thoughts in detail alongside those of Locke. Leibniz' New Essays (Nouveaux Essais sur l'entendement humain) was not a systematic criticism of Locke's philosophy. It contains occasional discussions of Locke's views, but in general Leibniz expounded his own views, without giving reasons, on the points raised by Locke. (Attg 482n. Brunet III, 950. Graesse IV, 152. Quérard V, 119. Yolton C1765-4.)

The second edition, substantially expanded from the 1718 first edition, with more than eighty pages of added text and revision. This is likely the first issue. There appear to be two separate issues of this work. Our copy collates as ESTC 006059086, without the final errata and table of contents. This is De Moivre's (1667 - 1754) most important book on probability. The work is essentially a gambler's manual, "giving a systematic presentation of the arithmetic principles upon which are based the solution of problems concerning the advantage of players and the size of wager which may be laid in a wide variety of games of chance" (Walker, p. 12). The second edition includes de Moivre's work on the normal approximation of the binomial probability distribution, his most memorable discovery. Indeed this work would hardly be known today if it had not gone into a second edition. (D.S.B. Stigler, pp. 70-88. 16331:17211.)

First Bohn edition, preceded by the 1844 Henry Colburn edition, which also incorporates both works, which OCLC locates in only one copy, at the Royal Ontario Museum. Very little information is available about Mrs. Henry Owen. Elizabeth Stone (1803 - 1881) was a novelist and historian. In *The Art of Needlework*, first published in 1840, Stone calls for the recognition of women's creative contribution to culture. "Stone lamented the 'ungallant silence of the historian,' and praised the needle as an instrument of civilization, superior to the destructive sword (pp. v-vi)," (Oxford DNB).
